

Summary System Status	
Not Subject to the Rule	PWS is either a transient PWS or no longer an active PWS.
Data Entry Error	Erroneous data resulted in false positive for ALE.
Invalid Sample	Sample was invalidated by the State consistent with 40CFR141.86(f).
Active	Most current PB90 is above the action level.
Not Resolved	PWS does not have 2 six month samples below the action level, or other resolving action. Or, PWS needs data management attention.
Sampled out	PWS has 2 six month samples below the action level but no PE
Resolved	PWS has 2 six month samples below the action level and PE is completed.
CCT Required	PWS exceeded the AL after sampling out or resolving a prior ALE. CCT is required in accordance with 40CFR141.81(c).
CCT Installed	Corrosion control treatment has been installed and the Primacy Agency has designated OWQPs.

Sample Invalidation Reason

(i) Lab establishes that improper sample analysis caused erroneous result,

(ii) State determines that sample taken did not meet site selection criteria,

(iii) sample container was damaged in transit,

(iv) substantial reason to believe that sample was subject to tampering

Detailed System Status

LCR sampling for the system increased to every 6 months starting March 2012. Since then, the system has sampled above and below the Pb AL, with exceedances in June 2012, June 2013 and June 2015. The last LCR samples were collected in September 2015 (lead level of 0.0027 mg/L) but these could not be used for compliance determination since only one set of samples was collected (the system is required to provide 20). Corrosion control efforts, including initial sampling of WQPs, occurred in late 2013, but efforts halted when the system remained below the Pb AL for almost two years. 6-month sampling will continue and EPA will discuss corrosion control and sampling protocols with the operator.

The system had a Pb AL exceedance a few years ago, but Pb levels subsequently dropped. During annual monitoring in 2015, they exceeded the Pb AL. System sampled again and Pb levels were still above the AL. Lead levels and public education has been conducted and continues to be posted. WQP are being collected regularly. OCCT will be proposed to EPA in mid-June.

The system serves a small elementary school (population of 55). The school has been on 6-month monitoring since 2005, but failed to sample since 2012. The school provides bottled water to students and faculty due to lead issues and because they do not meet treatment technique requirements for surface water rules. With EPA DWTSA funding, the school is tying in to an existing water system in April 2016 and will no longer be a PWS. EPA is communicating with the school on their need to sample and provide public education/notice. System inactivated (9/1/16).

System was on 3-year sampling and took 5 samples in August 2015. One sampling site had very high levels of Pb that put the system above the AL; other 4 samples were very low or ND. The site with high levels is a building that has not been used for three years. System will physically disconnect plumbing at the building. System sent EPA an updated site sampling plan, replacing non-residential sampling sites with residential sites. System will sample at newly approved sites for Pb/Cu and WQP every 6 months over the next year. The most recent round of sampling, conducted in April, 2016, showed ND at all five approved sites for Pb. We expect to reduce the monitoring frequency in 2017.

The casino had Pb ALEs in 2012 and 2015. In Feb 2016, casino changed out all fixtures where there was any detected lead and then collected Pb/Cu and WQP data. All samples collected were ND for Pb. WQP data do not indicate corrosive water but the system had initiated a water softening treatment just before the 2012 sampling event. EPA is requesting a repeat sampling using strict sampling protocols. PN/PE have been drafted and posting/distribution will commence next week (Apr 4). These results will inform the corrosion control recommendations. EPA will keep them on 6-month sampling for now. A formal letter goes out this week outlining specific requirements.

The casino had Pb AL exceedances in July 2014 and Aug 2015. EPA recommended they change the fixtures and re-sample. Casino changed all their plumbing fixtures on 2/16/16 and re-sampled for Pb/Cu and WQPs. We do not yet have all the data, but we expect the casino will remain above the AL. If Pb ALE confirmed, casino will proceed with public education/notification. They have initiated efforts to conduct a corrosion control study to determine best treatment options.

Pb/Cu levels for this system have fluctuated above and below the AL. System has CCT in place, but it is not working effectively. System recently altered treatment which resulted in a drop in Cu levels but increased Pb. Tribe applied for 2016 DWTSA funds to complete pilot testing on new corrosion treatment. Proposal ranked high and EPA is fast-tracking funding of the pilot test. EPA is working with the system to ensure PN/PE requirements are met. [NOTE: Population served by this system is comprised of 190 residential customers and the remaining population (~3,000) is from the casino.]

Two 6-month samples below AL. The system was required to monitor for at least 2 consecutive 6-month periods. System was required to do WQP monitoring and propose corrosion control if Pb level did not drop below AL.

PWS has one 6-month sample below AL. ALE was in Aug. 2013. PWS was back in compliance in Dec. 2013. Primacy agency overlooked putting PWS on 6-month monitoring. 1st 6-month monitoring completed in June 2016; however, it is above the action level. The system is required to conduct public education and monitor for at least 2 additional consecutive 6-month periods. System will also be required to do WQP monitoring and propose corrosion control if Pb level does not drop below AL. PWS completed public education requirements in Oct 2016. PWS took sample (now counted as the 1st 6-month sample) in Nov 2016, is below AL.

Detailed System Status

The PWSS ID Number for the Monument Valley Utah Schools water system is NN-4900227, not "NN049022717" as listed in Headquarters' spreadsheet. NNEPA may invalidate the 2011 Lead result of 0.032 mg/L. The samples were collected in the afternoon. The sampler had the maintenance personnel shut down the water line and when the sampler arrived from Blanding, Utah, the water line was opened just prior to collecting the sample. NNEPA believes that shutting down the water lines may have disturbed the pipe solder and caused the sample to exceed the lead action level. Lead and Copper samples were collected on October 5, 2015 and the 90th percentile for Lead was 0.2123 mg/L, which is above the Lead AL. The compliance status remains unknown since the October 2015 samples were collected in the afternoon (as with the 2011 data). Staff has been working with the operator on the sampling issue.

Infrastructure line is scheduled for removal in early 2016. Public notification remains in place. Bottled water is provided to all employees.

Infrastructure line is scheduled for removal in early 2016. Public notification remains in place. Bottled water is provided to all employees. System sampling 04/12/2016 showed BP90=12ug/L (with one sample 16ug/L). System implemented infrastructural improvements with addition of three automatic flushers on 08/08/16 and returned to compliance with sampling 04/28/2016 (PB90=6ppb, no exceedances of AL) and 09/14/2016 (PB90=11ug/L, no exceedances of AL). 11/21/2016 letter from PWS indicated that bottled water was still being provided. Remains on 6-month monitoring	Resolved	NV04	No
System is non-compliant. Bottled water is provided to employees. In exceedance of the AL with PB90=17, from samples at 17 and 43ug/L on 08/09/16. System implemented extensive infrastructural replacement of entire preexisting distribution plumbing, then a subsequent flushing program. An improper configuration of the hot water heater may also be contributing to the elevated Lead levels; replacement has been scheduled. Public notice is on file. Remains on 6-month monitoring. Detailed System Status

LGB 3/14/2018: Two rounds of samples collected in 2001 6M2ND, need to recalculate PB90 to determine if ALE in 2001.

ALE: 12/14/199 (0.065 mg/L), 8/10/2001 (0.02 mg/L), 9/18/2017 (0.033 mg/L)

FT 1/9/2018: No ALEs

LGB 7/31/2017: Per email from DE, this was a data entry error where lead and copper got transposed

LGB 3/14/2018: Four ALEs.

ALE: 10/20/2006 (0.057 mg/L), 6/20/2007 (0.017 mg/L), 6/19/2008 (0.017 mg/L), 12/18/2008 (0.034 mg/L),

FT 1/9/2018: No ALEs

incorrect units, should be 1.6 ug/L or 0.0016 mg/L

LGB 3/14/2018: Nine ALEs. Two rounds of 6M below the AL in 2005. ALE in 2006 requires OCCT.

ALE: 6/1/1996 (0.02 mg/L), 3/1/1998 (0.03 mg/L), 9/1/1998 (0.048 mg/L), 6/1/1997 (0.02 mg/L), 1/1/2000 (0.017 mg/L), 9/1/2001 (0.019 mg/L), 2/2/2002 (0.047 mg/L), 7/1/2004 (0.017 mg/L), 8/1/2006 (0.017 mg/L)

FT 1/9/2018: No ALEs

LGB 9/6/2016: 7/26/2016 email from Michelle Opalenik verified data entry error.

LGB 3/14/2018: Two rounds of 6M monitoring in 2009, ALEs are sampled out.

ALE: 2/27/2002 (0.016 mg/L), 9/6/2006 (0.055 mg/L), 1/11/2007 (0.02 mg/L), 1/23/2008 (0.021 mg/L), 8/6/2008 (0.016 mg/L)

LGB 10/18/2017: Two consecutive rounds of 6M monitoring below the AL: 3/2/2016 (ND) and 7/26/2016 (ND).

Repeats requested.

This is a Mobile Home Park where owners are allowed to bring in their own mobiles and all mobiles have different piping. The water system was requested to take repeat samples and failed and are currently on a strict timeline with our office. We spoke with our DE at the time, and being it is a MHP with different piping at each unit, repeats were asked to be taken. There was indication that proper procedure were not taken, so we provided the sample instructions, which were provided by the operator the first round. Currently, our DE has agreed to make them take samples now and again in the summer.

LGB 8/12/2016: PB90 taken 3/2/2016 = ND.

ALE - 8/25/2014 (0.018 mg/L).

Data entry error. Lead and copper were transposed

FT 1/9/2018: No ALEs

decimal error

FT 1/9/2018: No ALEs

Pb and Cu values accidentally switched on entry. Pb 90% = <0.002mg/l, Cu 90% = 0.410mg/l

LGB 11/17/2017: Part of 2017 File Review. 5 ALEs 2008-2012. PWSs did not sample out until 2013 and has not exceeded since. PWS has not earned triennial monitoring. 2016 samples were collected outside June-Sept monitoring period. Intuitively, this PWS should be on CCT; however, they meet the criteria to stop the treatment steps. Further, they should have installed CCT in the time-frame that they were exceeding the AL.

DDW: Sampling technique - excessive holding time suspected. Three subsequent rounds <AL. LGB 7/19/2016: State's initial response was that the sample should be invalidated; however the ALE was not removed from SDWIS. Two (2) 6-month (2013) and one(1) 1-year sample (2014) were below AL. This system has had at least 5 ALEs prior. 2015 1-year sample results are missing. Recommend File Review for this system.

ALE - 7.29.2008 (0.05 mg/L), 12.20.2010 (0.042 mg/L), 6.27.2011 (0.018 mg/), 2.3.2012 (0.024 mg/L), 6.7.2012 (0.016 mg/L)

LGB 9/25/2017: 2015.6M2nd was conducted in June. PWS should complete 6M monitoring,

DDW: Sampling technique - excessive holding time suspected. Two subsequent rounds <AL.

LGB 7.19.2016: State's initial response was that the sample should be invalidated; however the ALE was not removed from SDWIS. 6-M1st and 2nd (2015) were non-detect following ALE. No PE

ALE - 6/27/2001(0.02 mg/L), 6/24/2014 (0.028 mg/L)

LGB 10/18/2017: Part of 2017 File Review. 8/30/2016 (0.011) and 9/10/2017 (0.008), not consecutive 6M monitoring periods.

DDW - 6/8/2016-PE conducted on 1/11/2013. Ongoing Pb AL exceedances (5 in DWW) - DWSRF construction FA to be executed very soon. Project includes consolidation with City of Fresno and replacement of faucets and service piping.

LGB 7.19.2016: Not following proper monitoring schedule; missing 6M2nd 2014, and 6m2nd 2015. Two most recent sample results are not in SDWIS/Fed

LGB 10/20/2017: Per email from DE, the 6M1ST 2016 was and ALE. System had three consecutive ALEs (9/2/2015 - 0.045), (3/28/2016* - 0.078), and (9/28/2016* - 0.02). *PWS collected 'investigative' samples within the monitoring period which were not calculated in the PB90. There would have been no change to the ALE determination, but improper PB90 calculation all the same. PWS has had two rounds of 6M monitoring below the AL (2017).

LGB 10/18/2017: There appears to be an unreported ALE during the 6M1ST2016 monitoring period. 3 samples were collected and one exceeded the AL. If confirmed, this would make 3 ALEs for this PWS.

LGB 9/25/2017: Appears to be a big gap in sampling from 1996-2013, 17 year gap?

LGB 1/23/2017: Latest ALE on 9/28/2016 (0.02 mg/L). Previous PB90 was 0.004 on 2/9/2016. ALE on 9/22/2015 (0.045 mg/L).

DDW: 6/8/2016 (JD)-The Water System exceeded the lead action level again in March 2016. one (1) out of five (5) samples collected on March 28, 2016 showed a lead result of 150 ug/L. The high lead sample was collected from a home that is not occupied by a year round resident. To investigate and determine cause of high lead, this site (101 Roby Lane) was resampled on April 14, 2016, and the result was 2.7 ug/L. Public education material was sent to the Water System with a letter dated April 29, 2016, and has been distributed to the customers. Public education materials issued; next monitoring is due in March 2016P. The water system resampled the three sites on 2/9/16 that exceeded the lead action level in Sep. 2015. As shown below, all three sites tested below the lead action level of 15 ug/L. It is noted that some of the homes in the community are vacation homes and are not occupied by the year round residents.

The 2015 results for St. Helena Hospital should not have been entered in the state's database as the results consist of two special/investigative samples taken by the Hospital. When the Hospital's LCR data for 2014 was reviewed by our office, the 90% copper level was 1.3 mg/L so one of my staff told the Hospital to take additional samples in 2015. My office should not have entered that data as compliance results, nor was the 2015 LCR data entered correctly. We have since deleted those results from SDWIS. The Hospital plans to collect 10 samples at the end of next month (Aug 2016) which will be used for compliance and entered into the state's database. FT 12/29/2017: PWS not in CA SDWIS

LGB 3/13/2017: Per 3/9/2017 email from Wendy, system has been closed. DDW: via email 7/27/2016. The oldest one-room school in California, established in 1853, closed its doors for the final time in June 2010 and remains closed at this time. Via email 8/11/2016: Wooden Valley is closed, but they have kept their permit because they are selling the property and want to keep their options open. I told them if they keep their permit open, they need to get their WQP done and propose treatment. They submitted their first set earlier this year and the second set should be coming soon.

FT 12/29/2017: No change. Missing results for 2000-2006.

LGB 10/18/2017: Two consecutive 6M rounds of monitoring below the AL: 9/23/2016 (ND) and 3/29/2017 (ND).

LGB 3.8.2017: ALE on 9/13/2011 (0.03).

LGB 6/29/2016: the County went back and reviewed the samples collected 6/25/2014 (0.112 mg/L) and realized that this is a data entry error and the sampling was actually conducted on 6/25/2013. The lead 90th percentile result was switched with the 90th percentile copper result. The correction was made in SDWIS on 6/29/2016. Additionally, the water system has inactivated its source that was used in 2014 and was in the process of developing a new well. The county found out recently that they connected illegally to the new source and took bacteriological samples that came back total coliform positive. Due to using an unapproved source, they have been issued a citation and a boil water order until all of the work on the water system is completed and the source is approved by the county. During the permitting process they have done their initial chemical/bacteriological sampling and the county plans on having them collect their lead and copper samples when the new source approved, which has taken way longer than anticipated. This system is referenced in the group of "100 COMMUNITY WATER SYSTEMS WITH HIGHEST LEAD ACTION LEVEL EXCEEDANCES (ALES) IN 2013–2015" (page 35). Well disconnected. New source is being evaluated.

FT 1/9/2018: No change

6/15/2016: Water system indicated that he communicated directly with the owners of the elevated results. He did not conduct PN for the entire community. Please advise if this needs to happen, especially considering all subsequent testing has been non-detect. It was a poorly chosen initial sample site to begin with. The homes were not regularly occupied and each house has big, old brass backflow devices at the water meter. 6/8/2016-the system has conducted all the required follow-up testing and they are currently on track to begin annual sampling this summer followed by the 2 year and finally (hopefully) 3 year frequency. It turns out that initial "bad" lead result came from a home that is not regularly lived in. We have since created a LCR sample site plan. Unfortunately the error was not caught in time to take action. All samples since then have been ND and the WQI were all within normal (non corrosive) ranges. LCR was collected July of 2013. The 90th percentile stated for Lead in the attached spreadsheet is incorrect. It should read 0.13 mg/L, not 0.0364. The AL exceedance was caught last year (2015) and the system was put back on initial LCR sampling procedures. Since so much time had passed and a confirmation sample was never collected we started them back at square one. In the mean time they have successfully collected a portion of the required sampling. The second "6 month" period of sampling will take place in February and May. 90th percentile results (from the distribution) we have for LCR samples collected 8/14/15: Lead – ND. We also have WQP results collected 8/14/15 and 11/10/15. We worked closely with Bill and Sean on this one. Additionally the operator was instructed to distribute public notification once the issue was discovered. So far the results are looking good and the system is cooperating with the collection of samples.

LGB 8/1/2016: Speaking with Jamelle McCullough - Samples 9/2015, Feb 2016, and 7/5/2016 all ND. Still an issue with PE only going to the high house. System should otherwise be resolved.

<p>FT 12/27/2017: No change. PWS hasn't done 6 mo monitoring since 2012 ALE</p> <p>LGB 10/18/2017: This PWS should be returned to 6M monitoring.</p> <p>DDW: The sample results for the round shown are: nd, nd, 7.3-ppb, 8.4-ppb, and 34.7-ppb. The same site with the high result has been sampled on two other occasions: 8/26/15 with result non-detect, and 8/11/09 with result non-detect. However, no documentation was submitted from the water utility indicating that the high result was an error.</p> <p>LGB 7/29/2016: ALE occurred on 8/17/2012. Next sample was 8/2015, <AL. This system needs more monitoring!</p> <p>ALE: 0.022 (8/17/2012)</p>
<p>FT 12/27/2017: PWS not in CA SDWIS</p> <p>LGB 3/13/2017: Per 3/9/2017 email from Wendy, system has been closed. LGB 9/12/2016: ALE occurred on 10/20/2014. First 6M monitoring occurred on 6/9/2016. Will need second 6M monitoring event to sample out.</p>
<p>FT 12/27/2017: Didn't do 2 6 mo monitoring samples until 7/2016 and 6/2017.</p> <p>LGB 10/18/2107: Two consecutive rounds of 6M monitoring completed below AL: 7/15/2016 (0.003) and 6/16/2017 (ND). System has sampled out.</p> <p>LGB 9/12/2016: after 2006 ALE, follow-up sampling on 10/21/2006 and then 12/29/2011. After 2014 ALE, follow-up sampling on 9/20/2014. The two 2014 samples should have been combined since they were taken within the same 6-month monitoring period. None-the-less, the 2006 ALE has not been resolved/sampled-out.</p> <p>ALE: 0.038 (3/17/2006), 0.016 (7/9/2014)</p>
<p>FT 12/27/2017: 2 6 mo monitoring results ND. 10/13/2107 (ND)</p> <p>LGB 10/18/2017: 2017 6M1ST below the AL: 4/28/2017 (ND).</p> <p>LGB 5/18/2017: Per District: unit was vacant for 3 months prior to sample collection. Sample site had tested ND in 2001 and wasn't sampled since then. PWS is requesting sample invalidation. I expressed concern about the invalidation and requested an addition round of 6-month monitoring. System has been returned to 6M monitoring with first round collected in early 2017.</p> <p>ALE: 0.028 (10/20/2016)</p>

This PWS was part of the 2017 file review and had installed CCT due previous ALEs; however, the PWS stopped conducting CCT once their monitoring came back below the AL. Based on the compliance history and considering the fact that the PWS was previously required to install OCCT, I am changing the status to "CCT Required". LGB 9/16/2016: Data from SDWIS/Fed shows a 2014 ALE of 0.077mg/L. DWW shows only 2014 LCR results as 0.008 on 10/3/2014. Suspect Data Entry Error or sample invalidation/rejection by District.
9/14/2016: 9/13/2016 Email from Reese Crenshaw with individual sample results shows decimal entry error

LGB 1/11/2018: Review of email and submissions shows that exceedance was due to sample from an invalid tap - outside hose bib. The tap that produced a high result in 2015 also produced a high result in 2016, and did not result in an ALE. The 2016 result should be similarly rejected and the PWS should be consulted on LCR sample locations. I am changing the status to "invalid sample" and recommending that DDW have the PWS conduct another round of sampling that meets the sample site selection requirements.
